

Transplants by Disease Category at Each U.S. NMDP Transplant Center Leukemias and Lymphomas

This list includes *unrelated donor* marrow, peripheral blood stem cell (PBSC) and cord blood transplants coordinated by Be The Match®, operated by the National Marrow Donor Program® (NMDP) *as of March 2012*. A transplant center may have also performed transplants using related donors (family members) or donors from other registries.

This table provides the total number of unrelated donor transplants (marrow, PBSC and cord blood) using donors from the Be The Match Registry® at each U.S. NMDP transplant center. This data is cumulative from the date the center joined the NMDP. We encourage you to use this table as a basis for questions and discussion when you speak with the Transplant Center Coordinator.

These numbers are provided for general use. They are not intended to be used as a basis to predict any individual patient's transplant outcome or used as an indication of the transplant center's expertise level.

The information in this chart is updated quarterly and is available via our website at bethematch.org/access. From the bulleted list, select "Charts showing the number of transplants each U.S. NMDP transplant center has done for different diseases" and then click on the link for the appropriate chart.

You can also learn more about U.S. NMDP transplant centers by visiting Be The Match's online directory at bethematch.org/access or contact the transplant center directly for more details. The directory provides details about each transplant center. For help understanding directory listings, you can call 1 (888) 999-6743 and speak with a Patient Services Coordinator.
